

Towards a more equitable and sustainable financing for the HIV response

Impactful financing strategies

- Using the [HIV Response Sustainability Framework](#), more than 30 countries started developing and preparing for the subsequent implementation of sustainability roadmaps, including commitments to increase domestic investments in HIV
- HIV increasingly part of the universal health coverage financing agenda resulting from a more integrated national programming planning and budgeting
- Continuing partnership with the Global Fund and PEPFAR maximized evidence-informed prioritization and returns on investments for most impact

- Enabling countries to use Goals models to project the impact and efficiency of different HIV interventions and to plan cost-effective responses
- Resource needs modelling and Global AIDS Monitoring HIV financing data inform more impactful programmes and investments in more than 80 countries
- Developed granular programme and commodity-level resource needs estimates to achieve global 2030 targets for 118 low- and middle-income countries

Efficiency and effectiveness

- HIV financing trend analysis including sustainability plans, financing assessment and/or integration into domestic budgets in 43 countries
- Antiretroviral services organized and financed as part of national health systems in 73 countries
- Studies completed on resources efficiency, solving bottlenecks and HIV investment cases in 59 countries
